Most of the empirical findings have discovered a positive relationship between finance and economic growth. According to results from previous research studies, we expect that more developed capital markets in SEE region contribute to economic growth.

Eventhoughtheoreticalbackgroundssuggestapositiveroleofcapitalmark
We expect to have a negative sign with significant impact for this variable, since SEE countries, on average, had lower rates of growth compared to CEE countries, when we control for other variables from the model. The comparability of data was important criteria.
