The factors which make effective personal protection difficult to achieve are inherent in any method which relies upon modification of human behaviour to reduce risk, rather than on protection which is built into the process at the source of the hazard. An Personal Protection of a Personal Protection which has high human toxicity but little skin toxicity is inorganic lead.

PPE should be used, however, to supplement or augment other Personal Protection

To perform this task the physician must be given information on the type of Personal Protection being used and the type and length of work the worker will be performing while using the respirator. In the United Kingdom, an organization that has extensive expertise in respiratory protective equipment is the Institute of Occupational Medicine.

The goal is to keep the sound level under the earmuff or earplug to less than 85 dB. Some devices contain orifices, valves, or diaphragms intended to produce this nonlinear attenuation, typically beginning once sound levels exceed 100 dB sound pressure levels SPL. Any protective device must be properly fitted. Personal Protection it is to provide the degree of protection for which it was designed.
