Good observing nights start in the daylight with a thorough setup and check of the telescope. Moreover, the skills you'll develop using binoculars to locate these things are exactly the skills you'll need to put a telescope to good use. You'll hunt for some wonder in the depths and miss it, and hunt again, and miss it .

Orion offer the best telescopes for every level: Most astronomy binoculars use "porro prism" design. A sailor of the seas needs top-notch charts, and so does a sailor of the skies. Expand your viewing experience with accessories ranging from moon filters to power-boosting Barlow lenses to advanced computerized telescope mounts. Can't tell you how many nights of great observing have been shanghaied by discomfort.

Modern image-stabilized binoculars are a tremendous boon for astronomy though sometimes take audio notes during particularly good observing.
